***Reasons for Allowance***

1. Claims 1, 4-13, 17-18 and 20-26 are considered allowable since when reading the claims in light of the specification (MPEP § 211.01), none of the references of record alone or in combination disclose or suggest the combination of limitations specified in independent claim 1, including “input section” (supported at e. g., ¶¶ 0008, 0009), “operation history storing section” (supported at e. g. ¶¶ 0008, 0009), “operation anticipating section” (supported at e. g. ¶¶ 0008, 0009), “anticipated operation supporting section” (supported at e. g. ¶¶ 0008, 0009), “reducing statistics” (supported at e. g. ¶ 0041) wherein an information terminal device learns a pattern of operations executed by a user based on history information of operations executed by the user, and supports the user by anticipating a next operation to be executed by the user, an operation supporting method performed by the device and a program for executing the method where inter alia, where the possibility of automatic execution is reduced by reducing the statistics (frequency) with respect to the history of the consecutive operations that cause automatic execution.

The closest prior art (Laciw et al, USPN 5,390,281) teaches method and apparatus for deducing user intent and providing computer implemented services. Alternative prior art, (Clancey et al., USPN 6,216,098) teaches simulating work behavior. However, neither Laciw nor Clancey, separately or in combination teach the possibility of automatic execution is reduced by reducing the statistics (frequency) with respect to the history of the consecutive operations that cause automatic execution.

Inter alia, independent claims 23-26 are allowed for similar reasons.

Art Unit: 2129

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
3. The Examiner interprets "computer readable medium" to be hardware on which program statements (software) are stored such that such instructions are executed on a terminal device (computer).
